

Aim:

Write Java program(s) on creating multiple threads, assigning priority to threads, synchronizing threads, suspend and resume threads

Source Code:TestThread.java

```
class RunnableDemo implements Runnable{
    public Thread t;
    public String threadName;
    boolean suspended = false;
    RunnableDemo(String name){
        threadName=name;
        System.out.println("Creating " +threadName);
    }
    public void run(){
        System.out.println("Running "+threadName);
        try{
            for(int i=10;i>0;i--){
                System.out.println("Thread: "+ threadName +", "+i);

        RunnableDemo R1 = new RunnableDemo("Thread-1");
        R1.start();

    R2.resume();
}
